Interface Design
Design System
Prototyping
Identity Design

Education

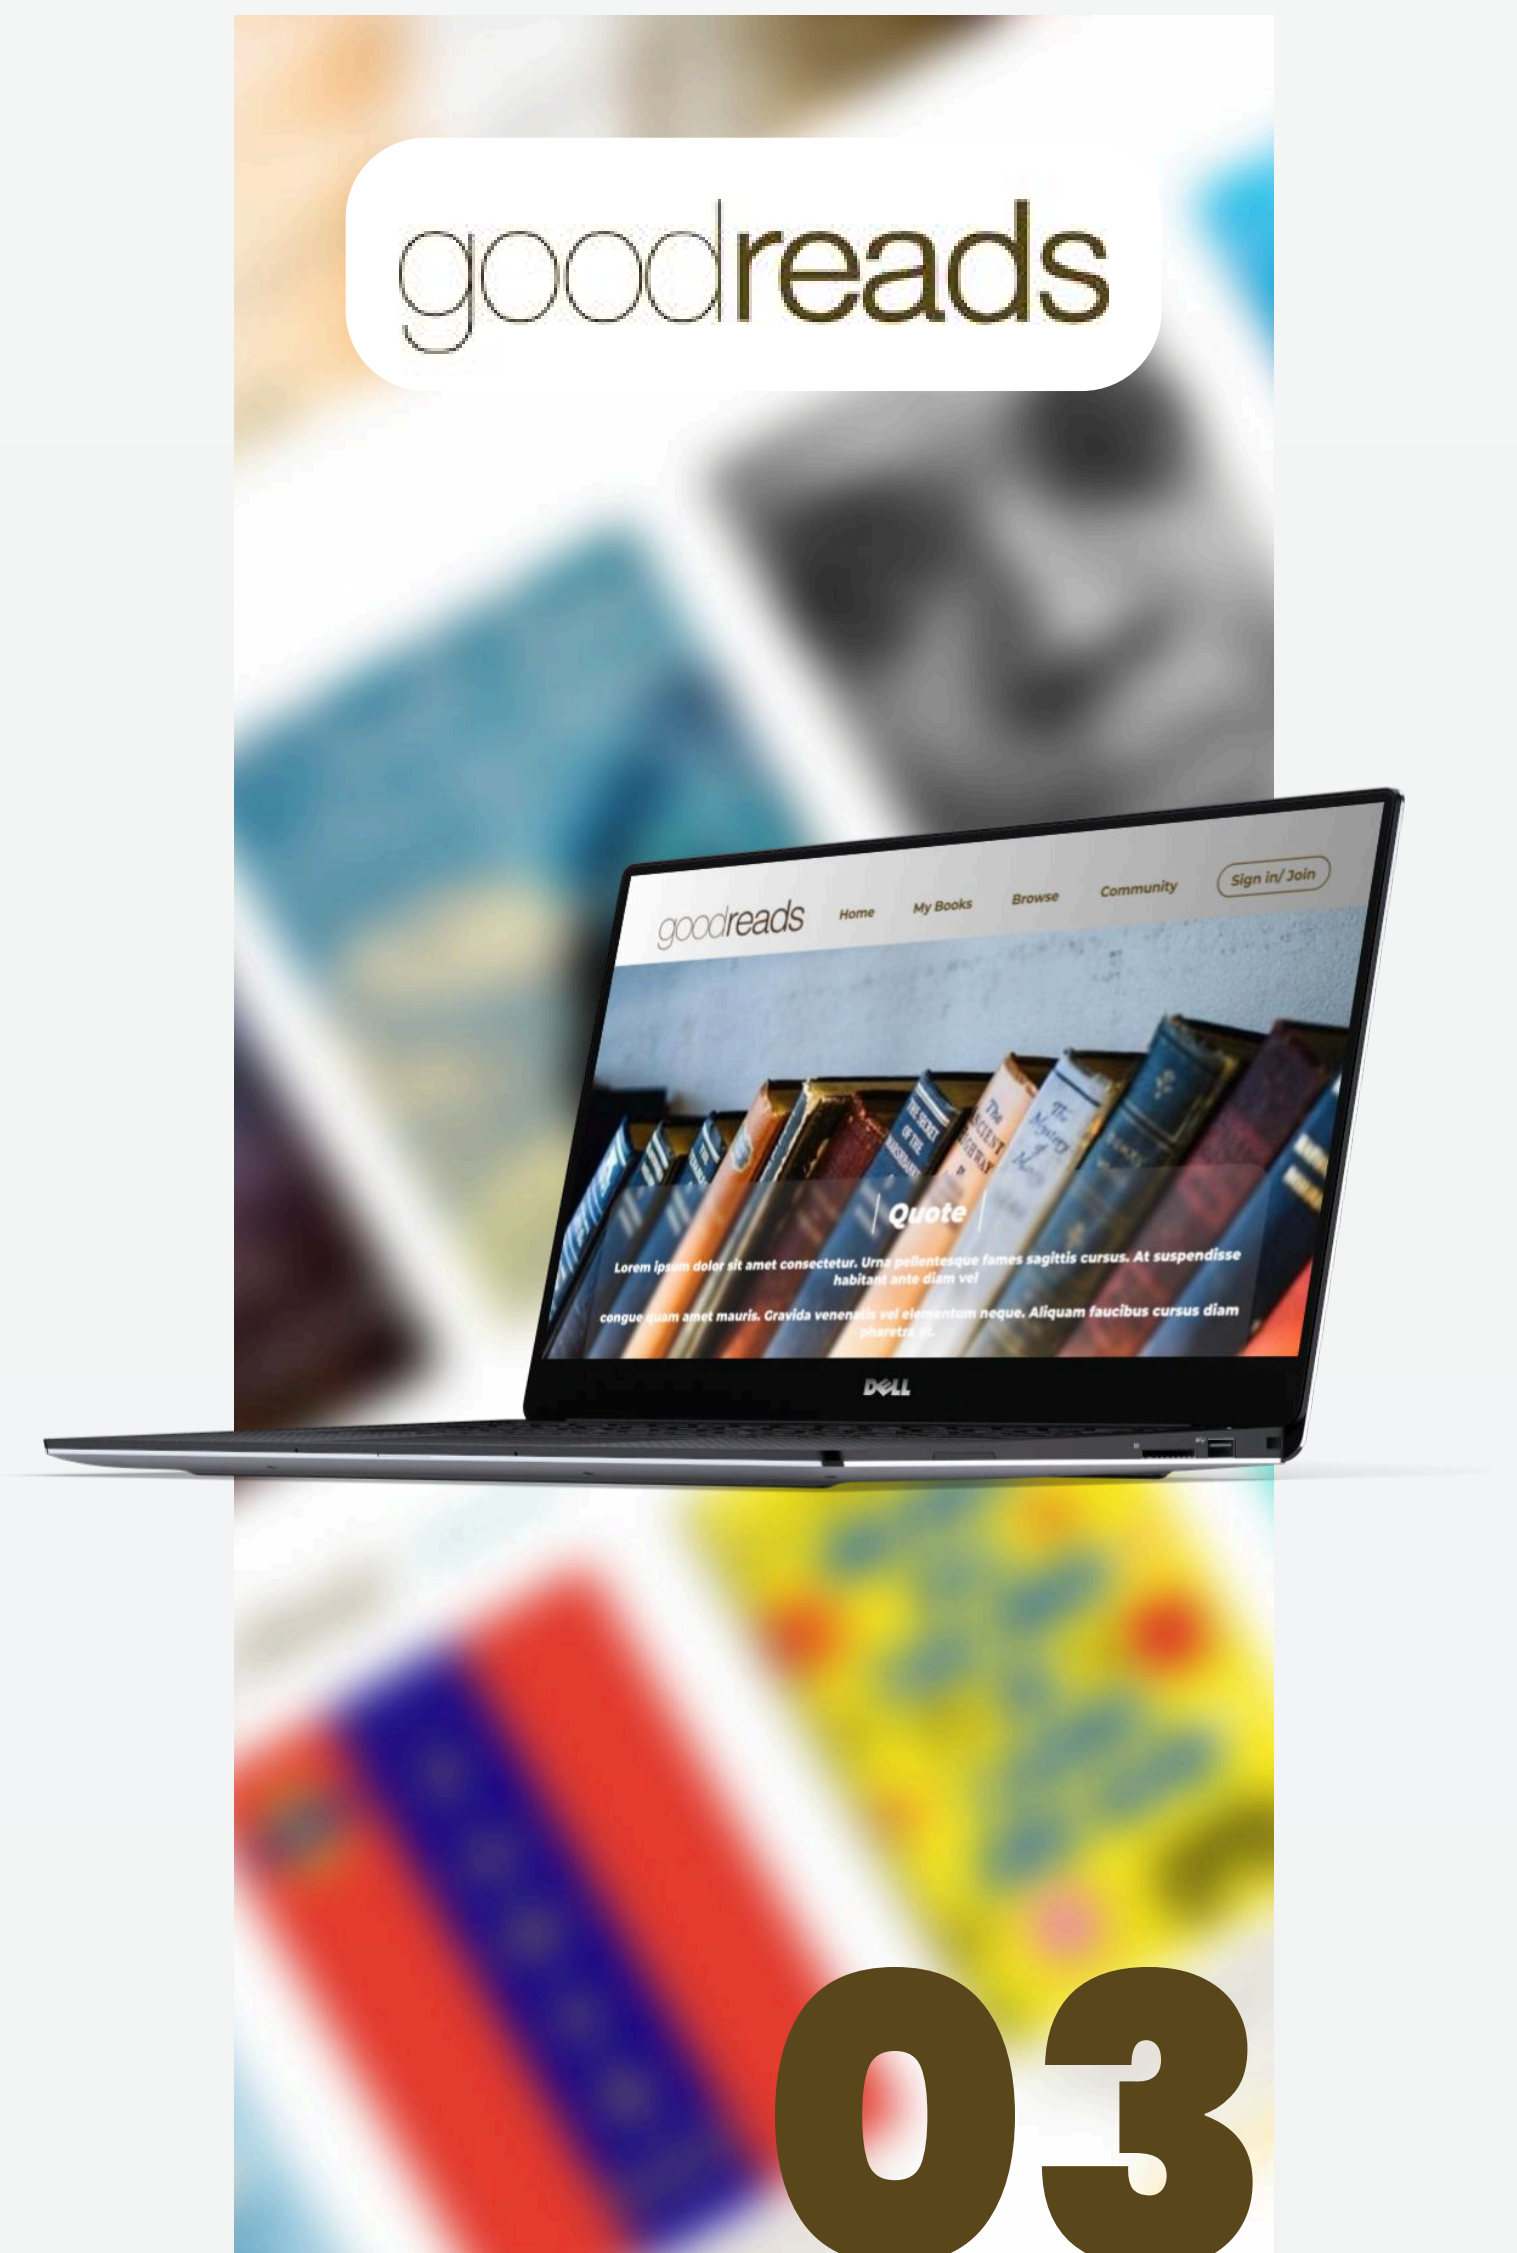

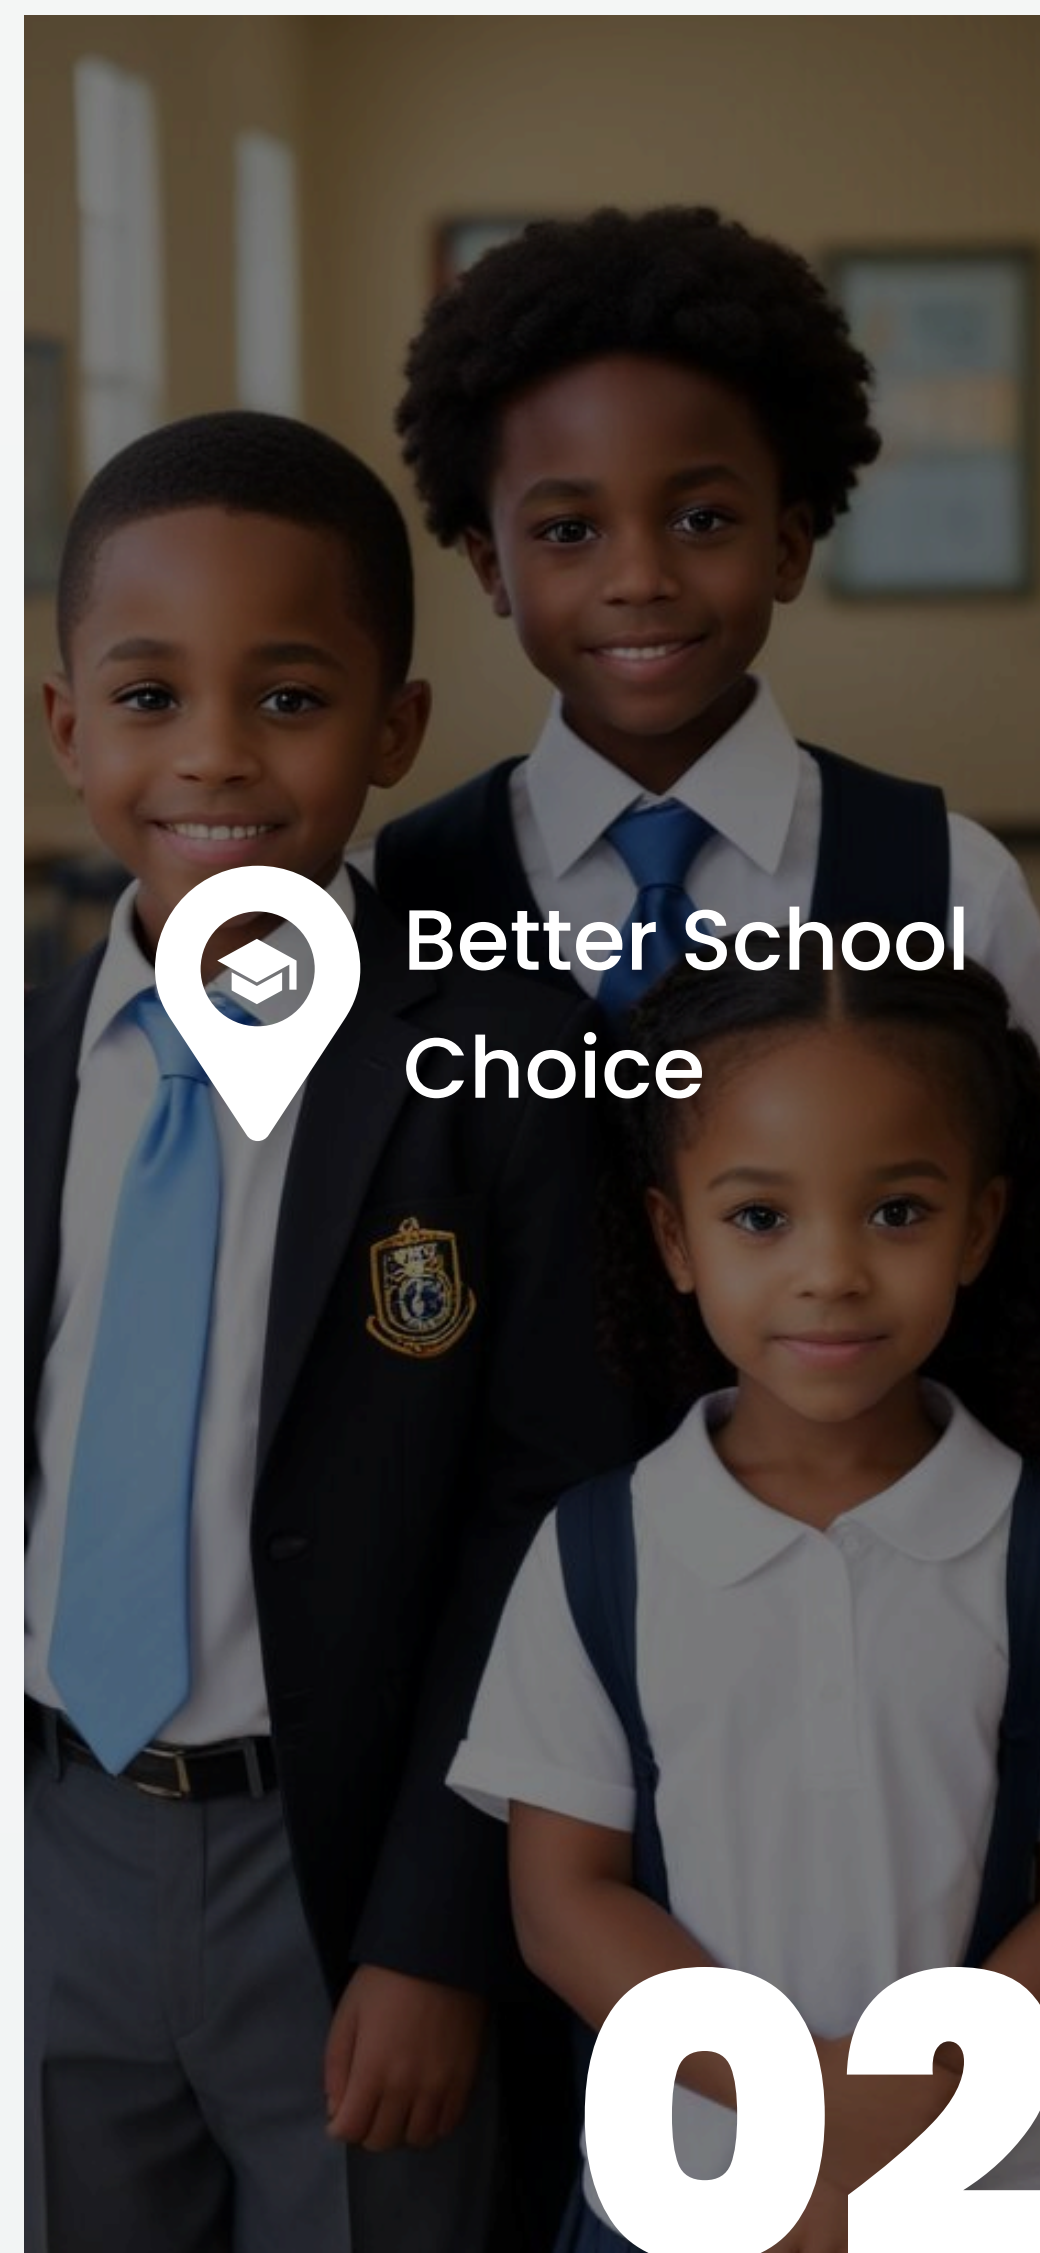

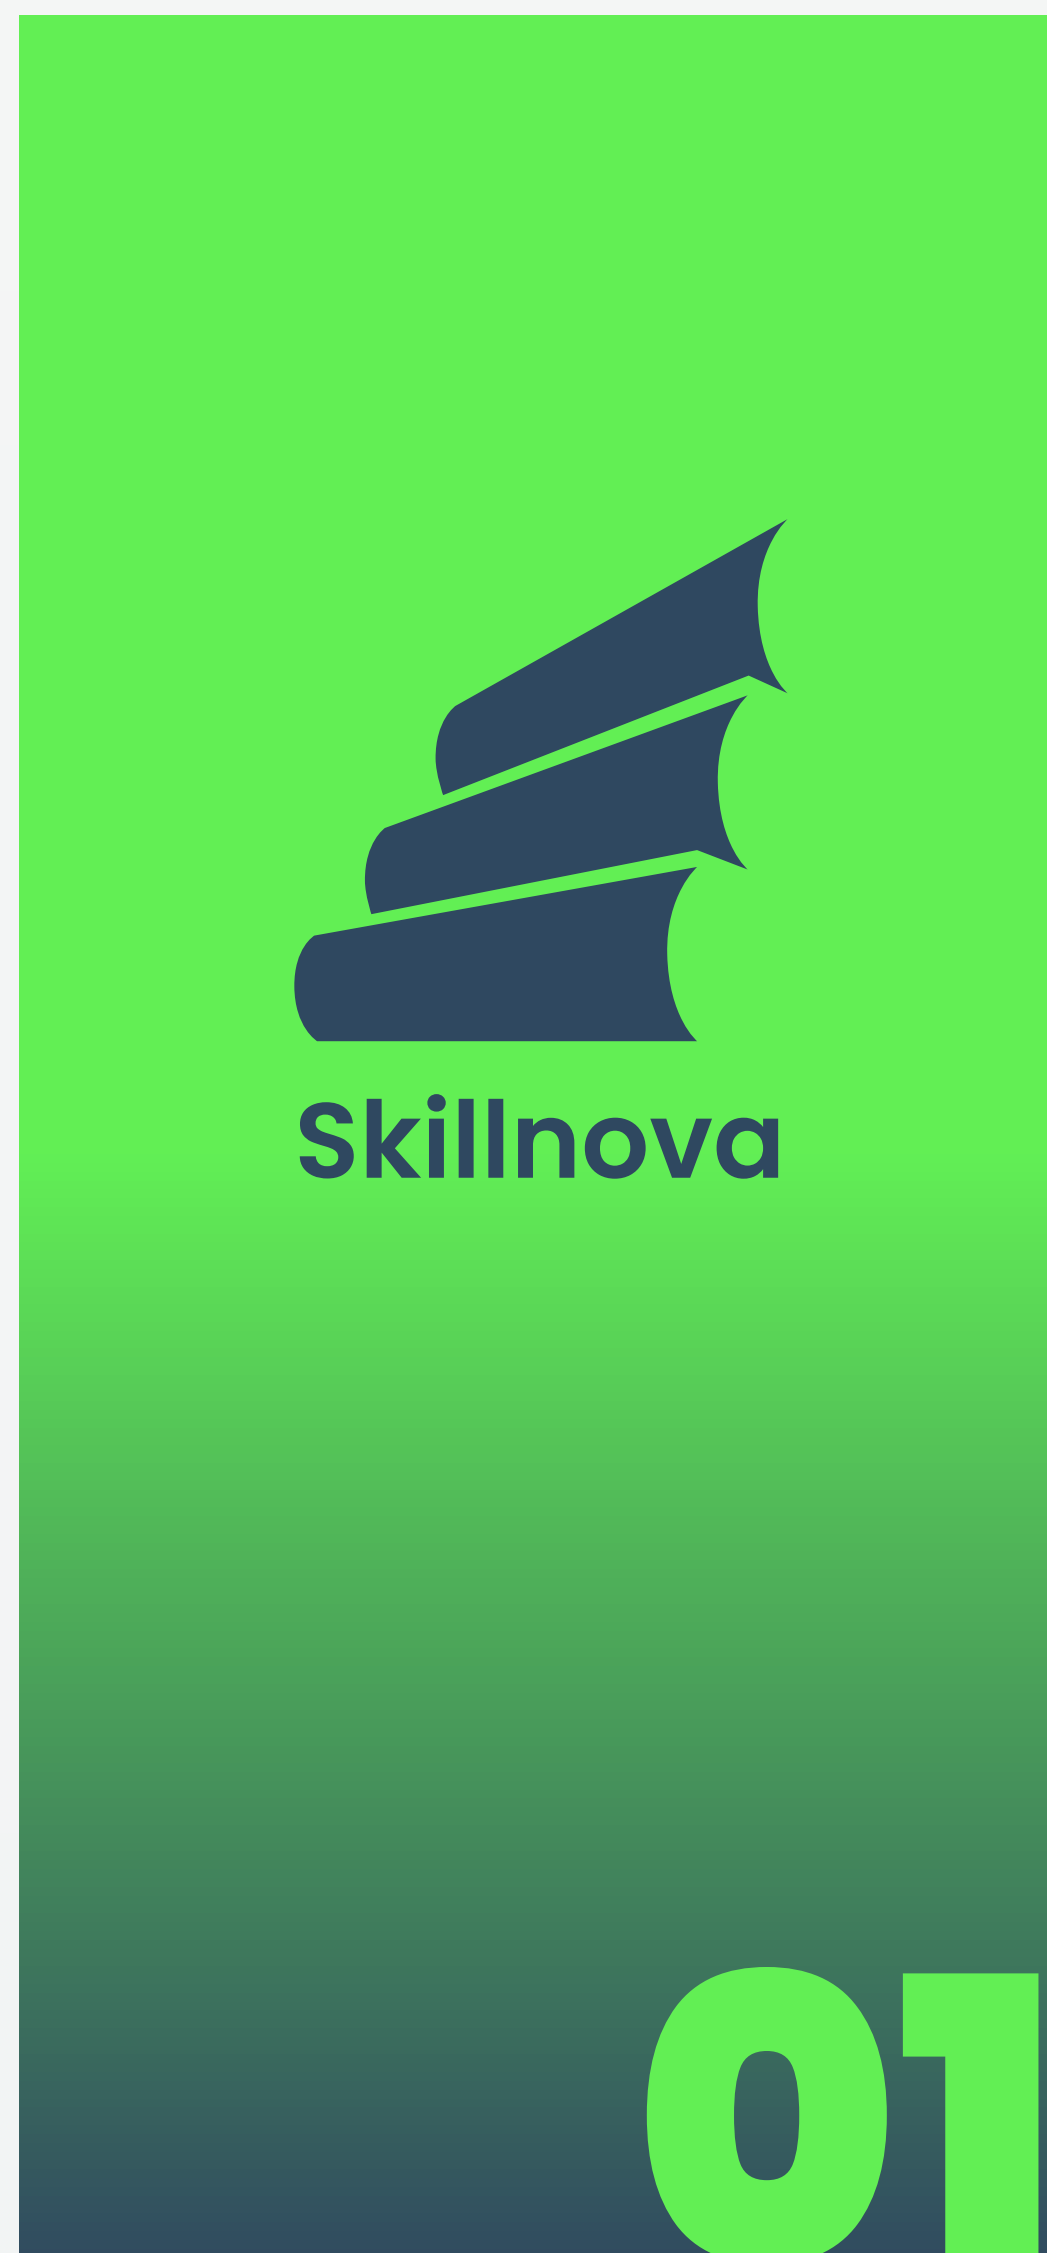

UI/UX Design (Product Design)
Moringa School
2025

Google UX Design Certificate
(Ongoing)

Diploma In Fine Art & Design
(Graphic Design)
Kenyatta University
2021 - 2024

INDEX

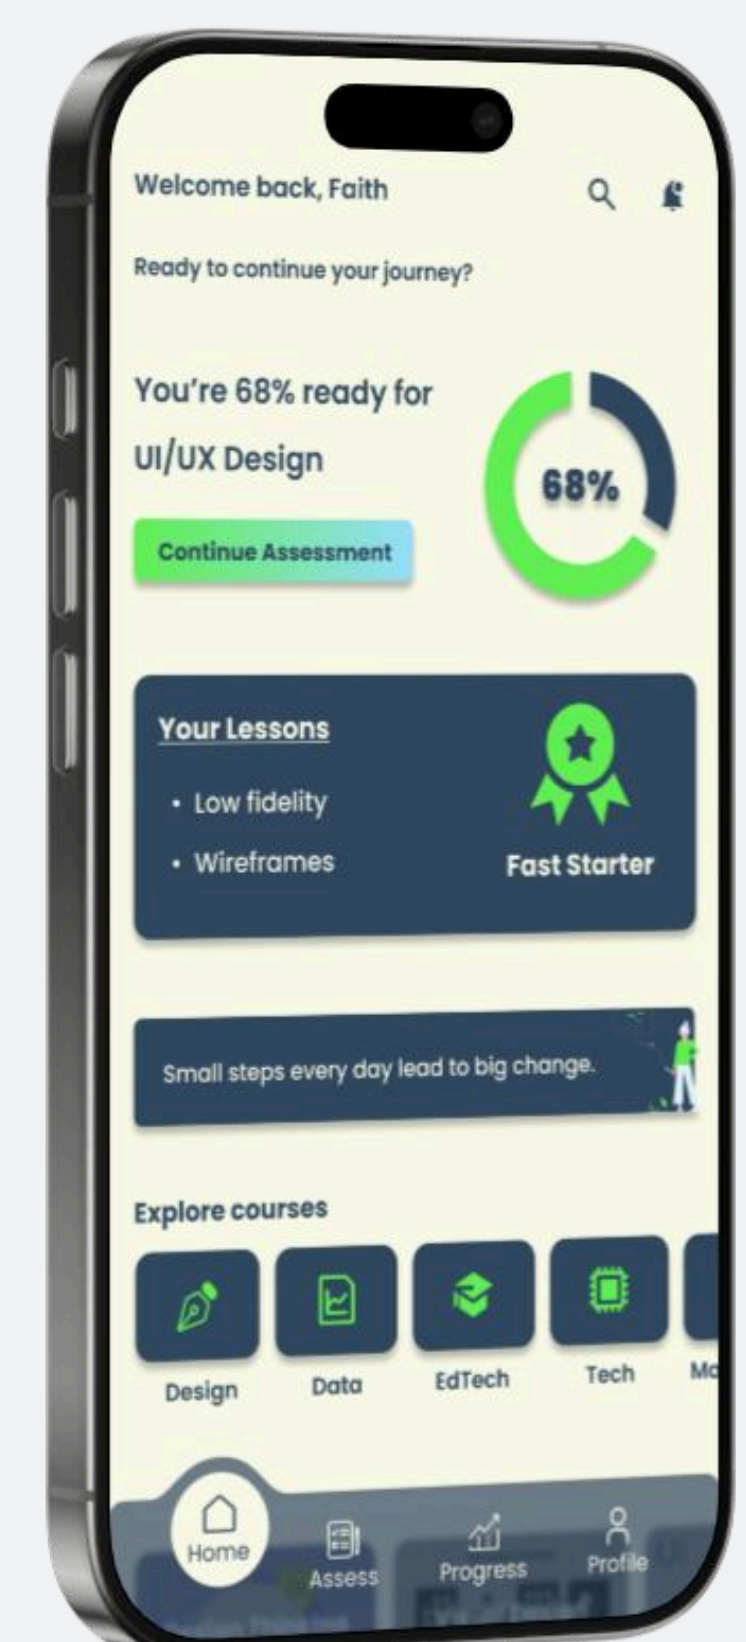

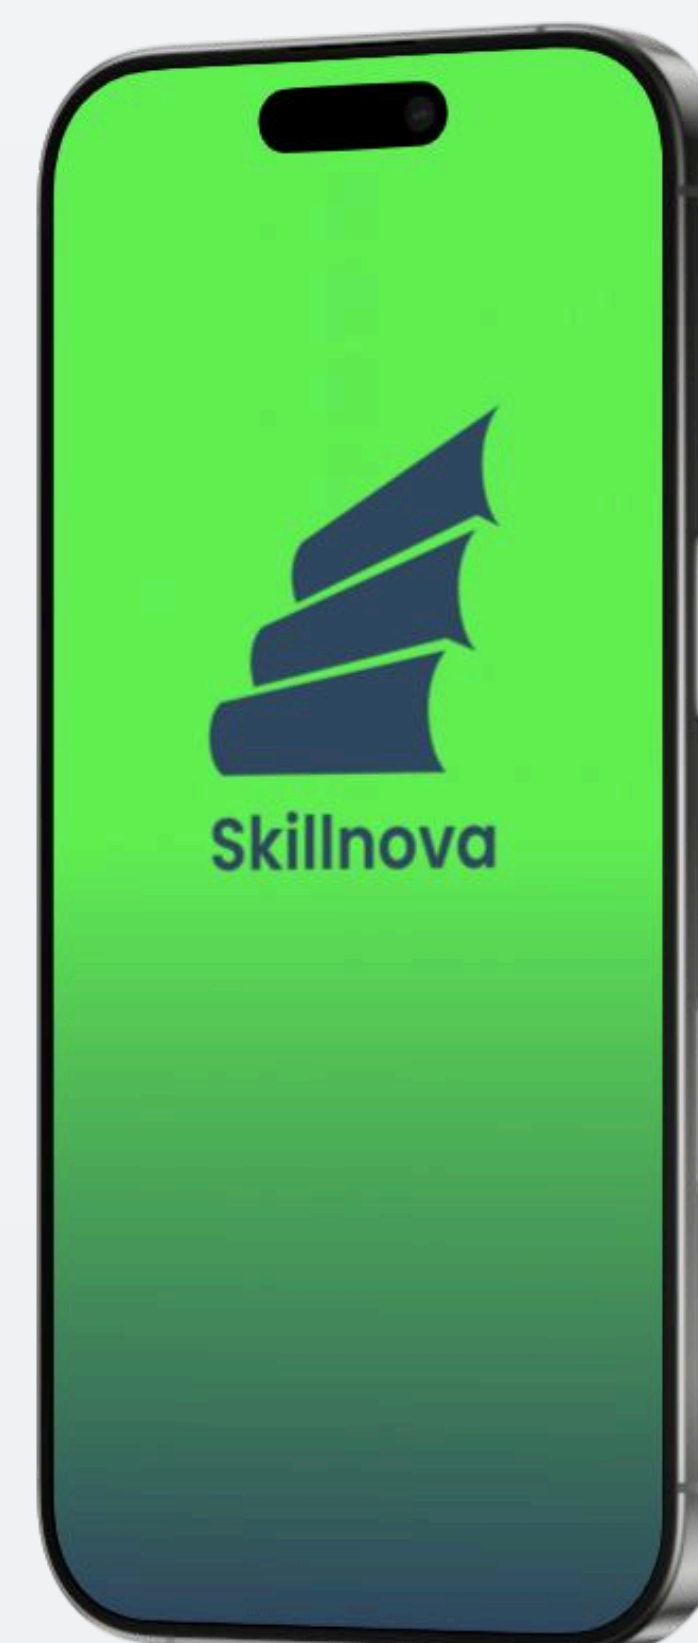

01

Skillnova

A personalized assessment app for aspiring tech learners.

Skillnova is a personalized platform tool designed to evaluate course readiness, track progress and recommend targeted resources to ensure learners begin their tech journey on the right foundation.

Problem Statement

Many aspiring learners struggle to transition into tech because they lack clarity on their readiness level, feel

overwhelmed by scattered resources, and don't have personalized guidance to bridge their knowledge gaps.

Target Audience

- Students
- Aspiring tech learners
- Women and youth across Africa
- Young professionals eager to upskill

The app supports learners who often fall through the cracks, by giving them clarity, structure and confidence

THE PROCESS

UX Research

- User Interviews
- User Stories
- Qualitative & Quantitative Research
- Moodboards

Ideation

- User flows
- Jobs & User stories
- Wireframes
- Functional Prototype

UI Design

- Visual concept
- Design Approach
- Components
- Animation
- Interactive Prototyping

Testing

- Usability Testing
- Remote Testing
- Corrections
- Feedback Info

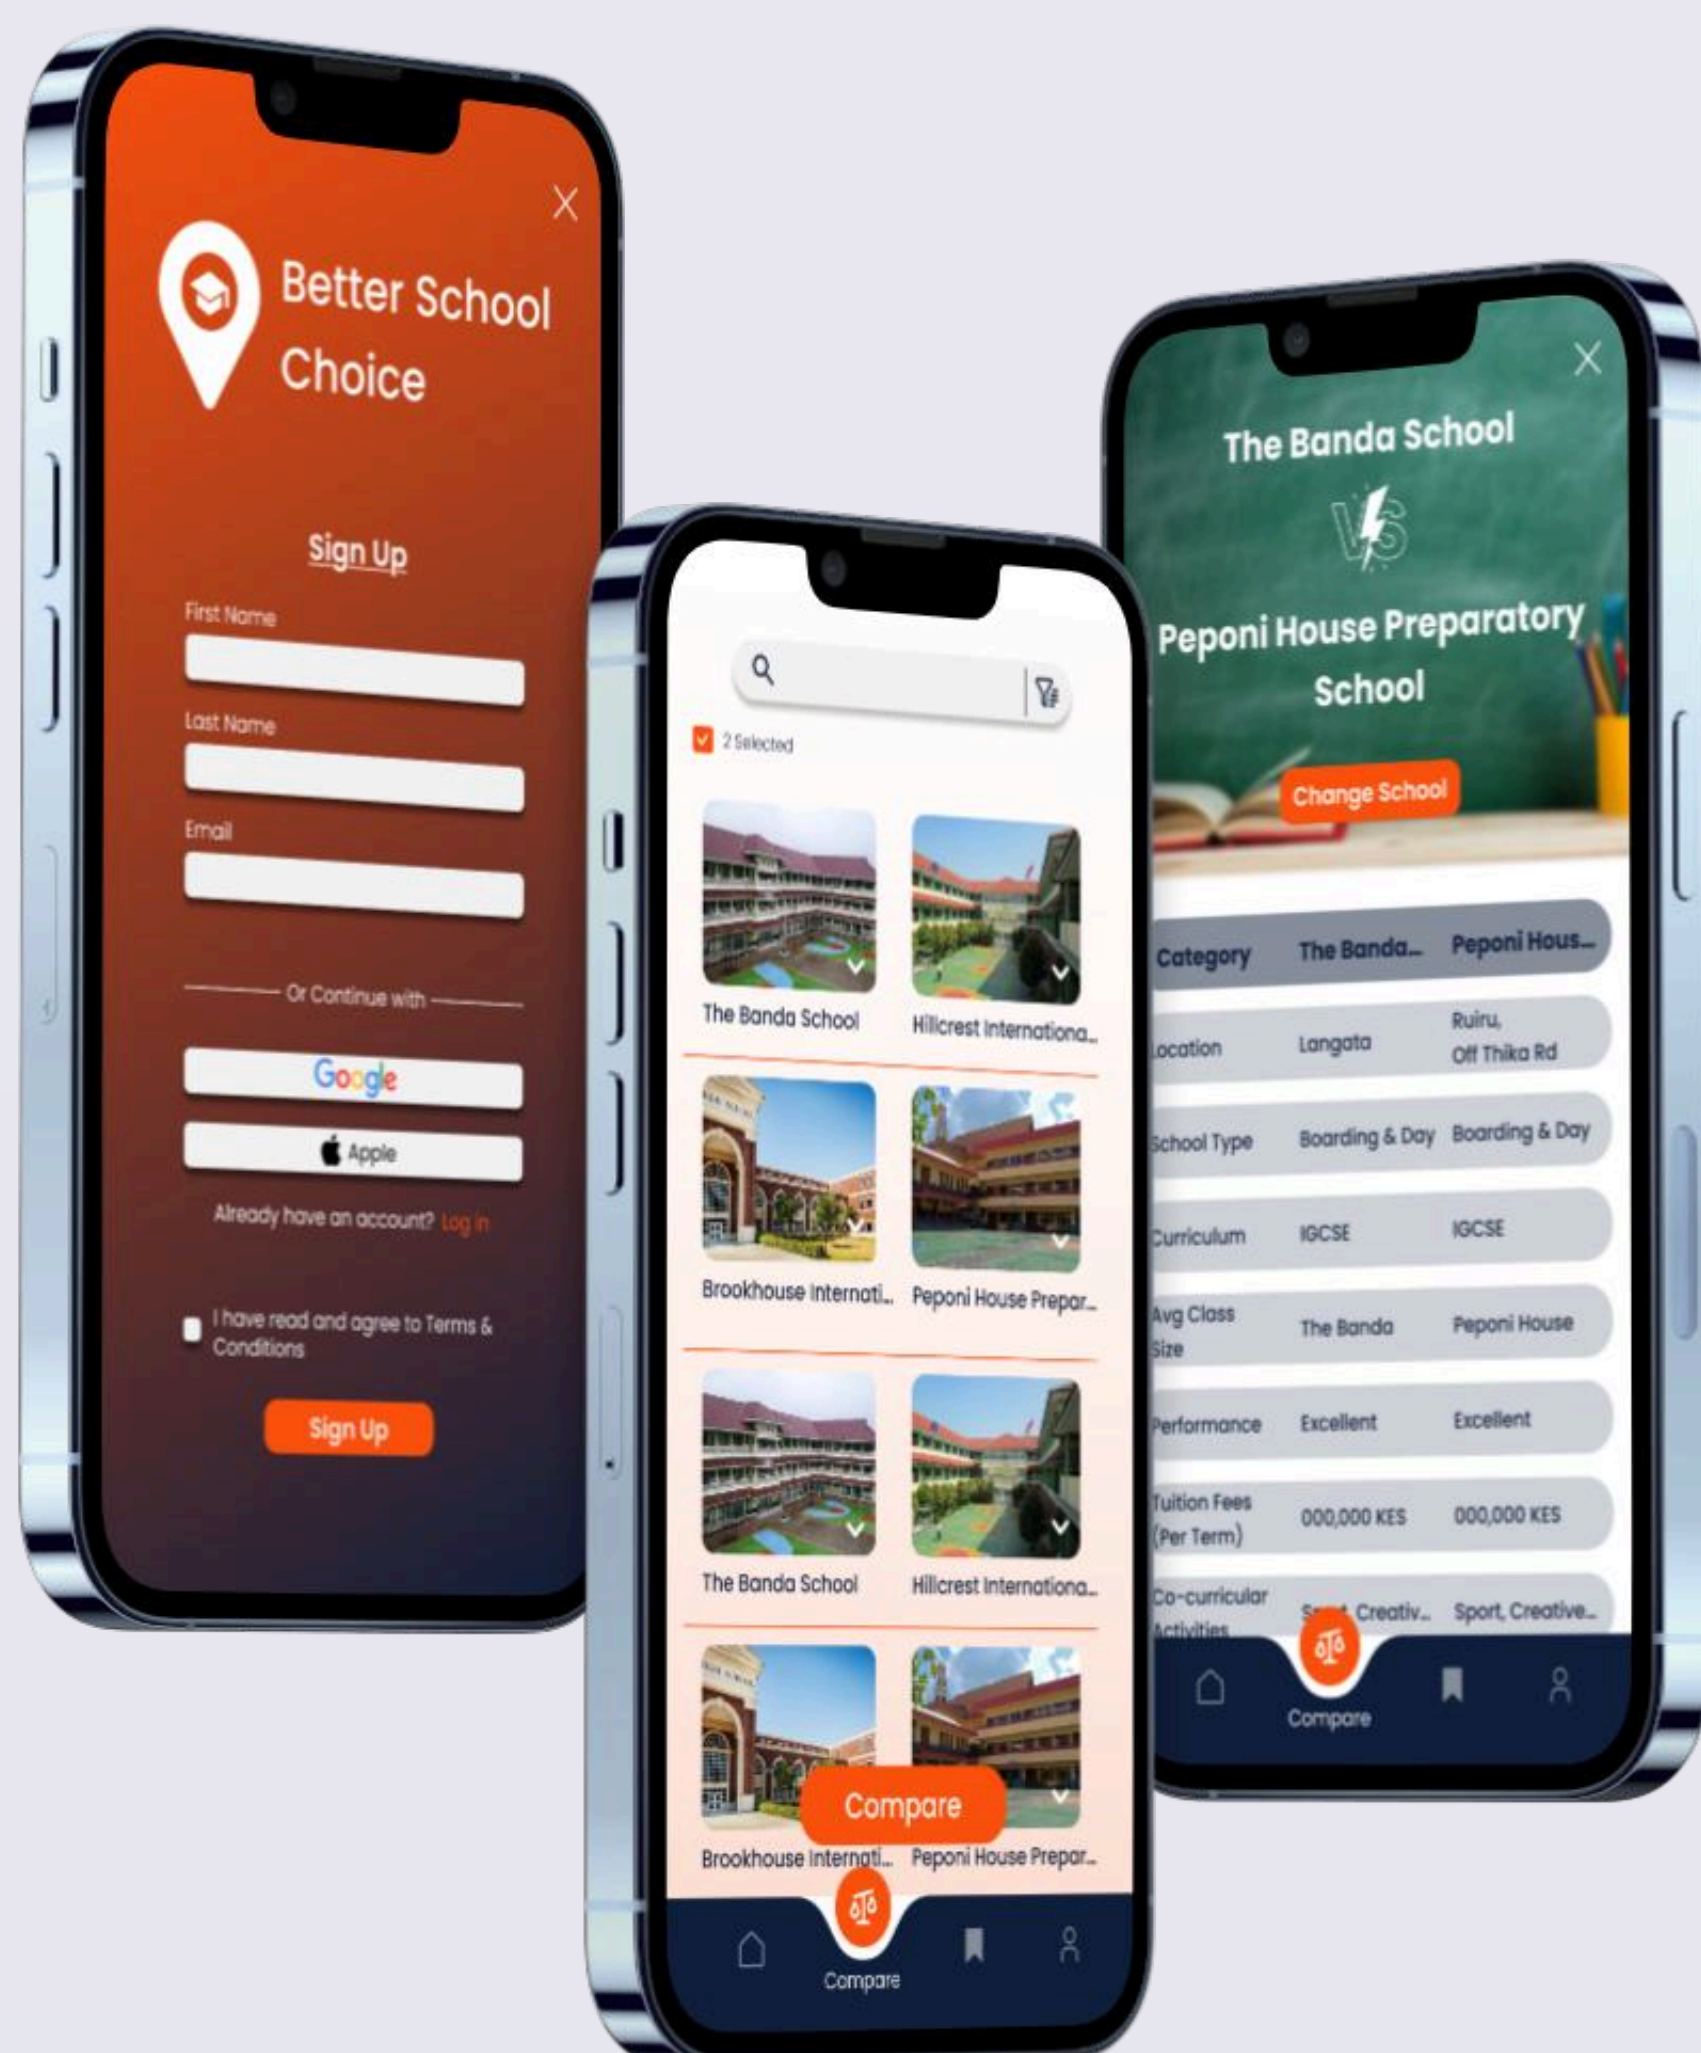

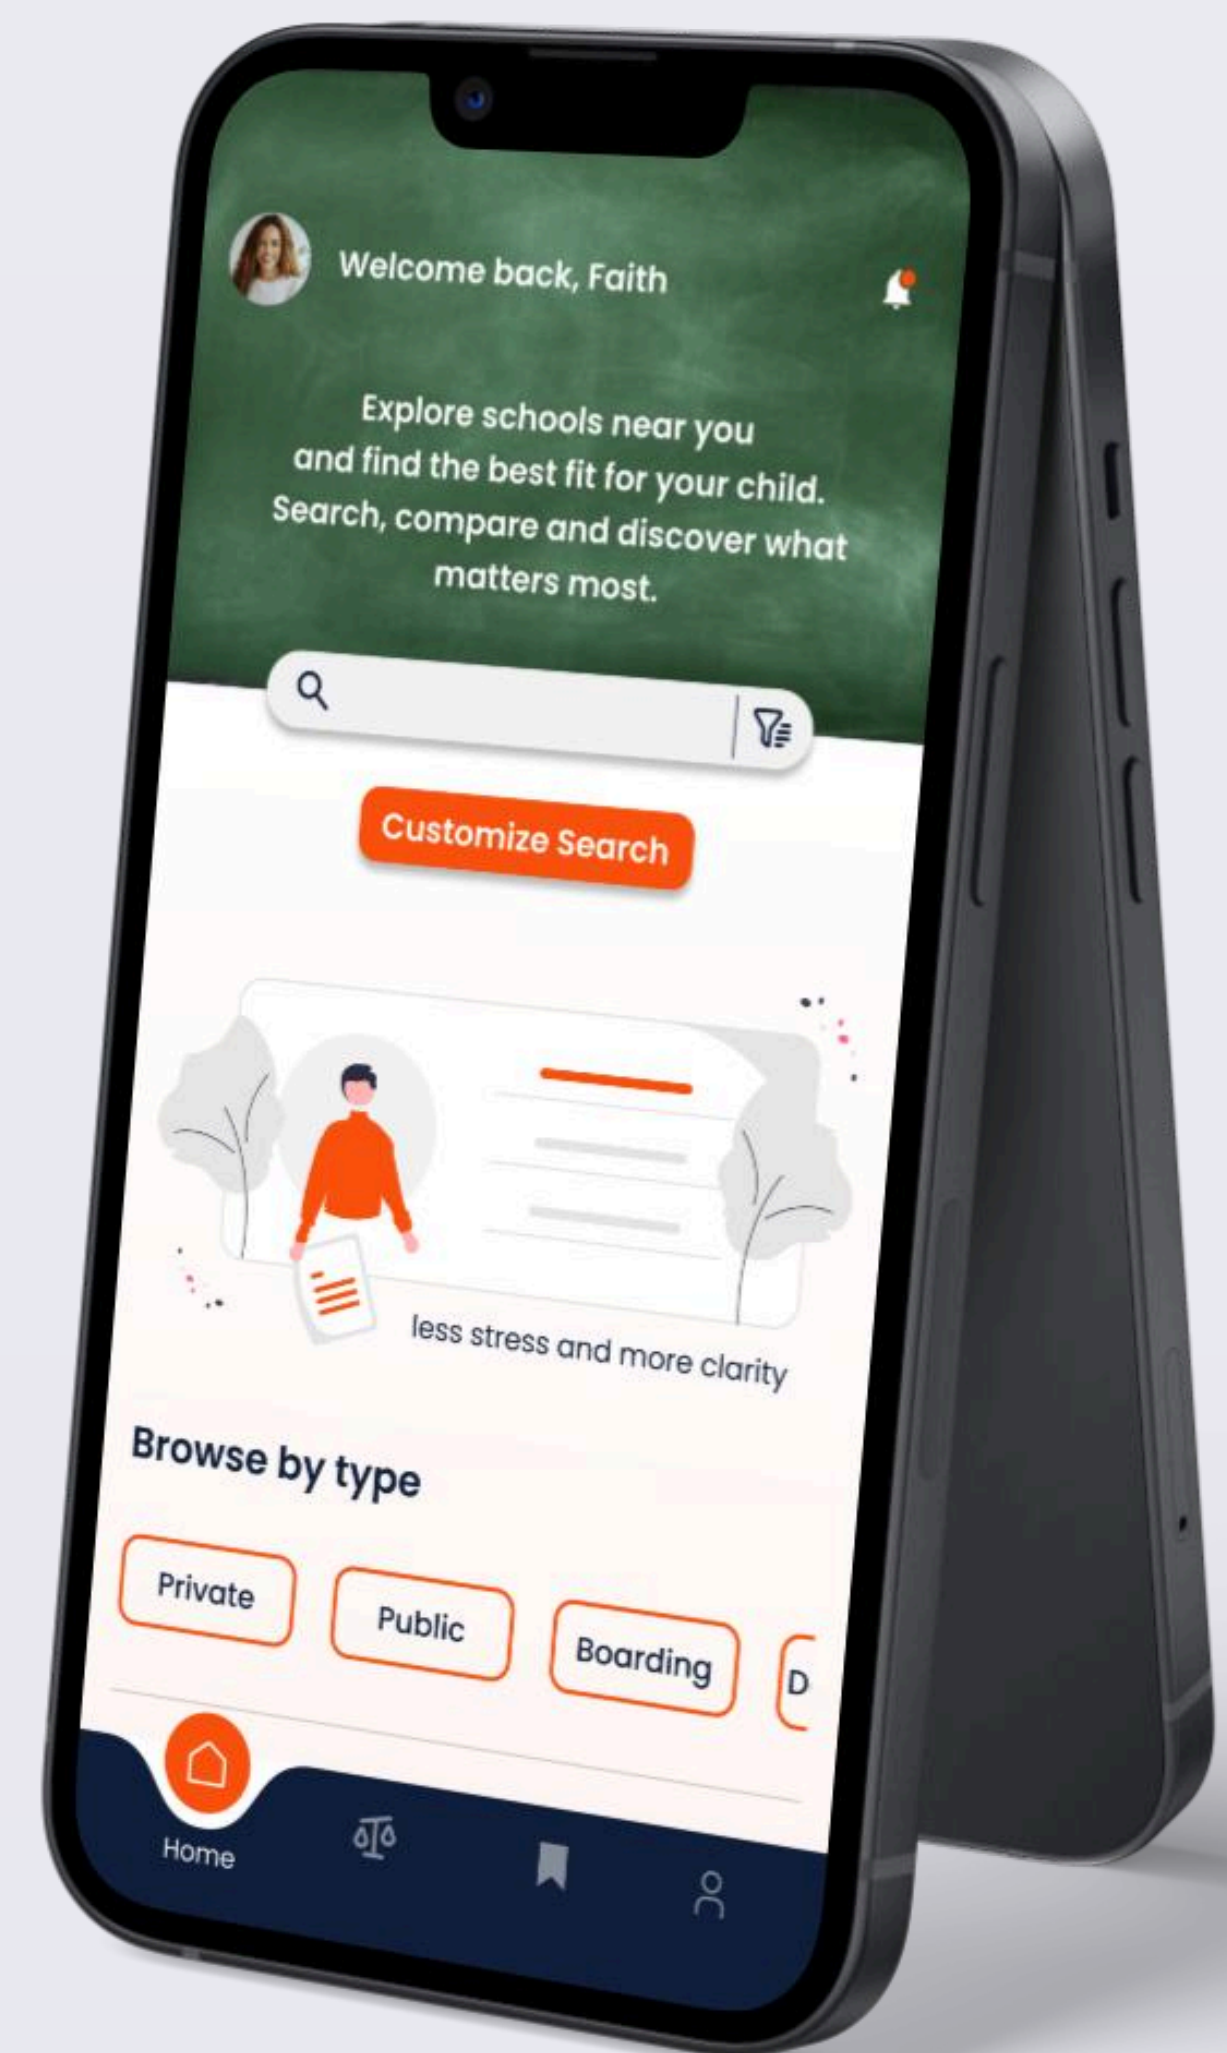

02

Better School Choice

Helping parents make confident, informed decisions.

Better School Choice is a mobile platform designed to help parents search, filter and compare schools based on location, fees, extracurriculars and reviews.

Parents can save favorites, read other parents' experiences and access support resources, making the school selection process faster, clearer and less stressful.

Problem Statement

Kenyan parents struggle to find a school that aligns with their child's learning needs, values and budget due to a lack of centralized, trustworthy and detailed school comparison tools.

Target Audience

- Parents with children seeking admission
- Tech comfortable parents
- First time parents seeking school
- Parents switching schools

The app supports parents who often feel overwhelmed in the school search process, by giving them clarity, transparency and confidence in choosing the right school.

THE PROCESS

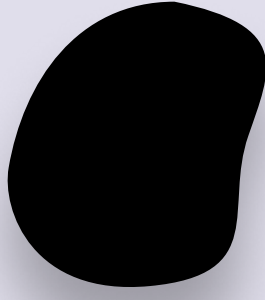

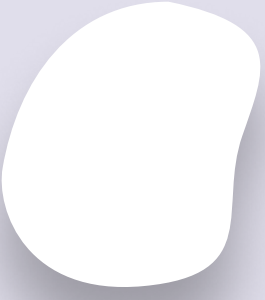

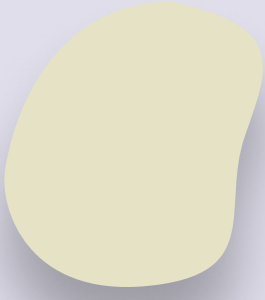

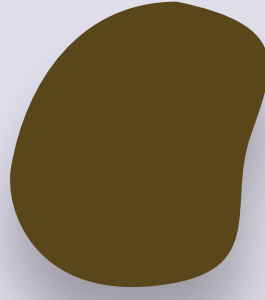

03

goodreads

Redesigning Goodreads for clarity, connection, and discovery.

While Goodreads is widely used, users often struggle with cluttered layouts and dense information displays, difficulty in discovering new books beyond recommendations, a weak sense of community compared to other platforms and a non-intuitive mobile experience

Research & Insights

To understand user pain points, I conducted an evaluation and reviewed feedback from Goodreads users online. I also analyzed competitor platforms such as StoryGraph and LibraryThing.

Key insights included:

- Users want a cleaner, more modern design that feels approachable
- Book discovery is a core motivation but the current search and recommendation system feels limited
- Many readers see Goodreads as functional but not social, they want stronger community interaction

Goals

- Simplify the interface for clarity and ease of use
- Improve book discovery and browsing experiences
- Strengthen community and social engagement features

Thankyou
